

## RED SEA HOUSING: BUILDING FIRE RESISTANT ACCOMODATIONS

Responding to the need to build even safer Modular Accommodations, Red Sea Housing Services is proud to introduce the Firemaster 60 Series construction. Recent tests have shown that this option will meet our client's rigorous requirements for fire resistant accommodations.

Red Sea believes this is the first exterior wall construction for remote camps to have *PASSED* ASTM E-119-09c and achieved a 1 hour fire resistance rating. The test was conducted by Intertek at their Evaluation Center in Elmendorf, Texas, U.S.A. on February 17, 2010 and reported in Report Number 3192017SAT-010 on February 25, 2010.

The exterior wall composition is a proprietary use of readily available materials. Red Sea has combined these materials in a way no one else has considered.

The walls can also be placed on your choice of floor systems, including Concrete Slab or Steel framed floor with cement board decking. Neither floor system can burn under normal conditions.

The roof system is also a proprietary use of readily available materials assembled to be fire resistant.

For an extra measure of fire resistance, Red Sea recommends the use of steel doors in the accommodations. Electrical and plumbing systems are installed in accordance with modular camp building practices.

Red Sea Housing will be exhibiting at stand Q15 at Nigeria Oil and Gas Tech (NOG Tech) 2010 Exhibition at the Eko International Exhibition Centre, Victoria Island, Lagos, Nigeria.
